Subject: Plan A Assessment Report and Revised Site Closure Request.
LPST No. 104626, Jet Fuel Storage Tank #20, Randolph AFB, Texas
USAF Contract 41624-92-D-8036, Delivery Order 0017
Parsons ES Project No. 726876.33121

Dear Major Marchand:

Enclosed are three copies of the Plan A Assessment Report for the Tank #20 site at Randolph AFB. This report includes a revised Site Closure Request Form as attachment 20, in accordance with new guidance issued by the TNRCC in December 1996. Our recommendation for this LPST case number is to close the site from any additional action. No post-closure restoration or abandonment actions are proposed because it would jeopardize the integrity of synthetic liner recently installed around the tank berm and dike structure. The monitoring wells will be maintained to provide coverage of the tank #20 portion of the entire IRP site.

Three copies of this draft report were hand delivered on March 27, 1997 to Randolph AFB to the attention of Steve Barnes. Mr. Barnes will review the report, and if he agrees with its findings, and completeness, he will sign the appropriate sections of the report and deliver to the TNRCC. If Randolph AFB desires to include more information and data in this report than has been provided us, then we will incorporate any new information in the report and forward you additional copies of the revised report.

Contact me or John Ratz in Denver if you have any questions regarding the performance of this work or the contents of this submittal.

Sincerely,

Brian Vanderglas

Brian Vanderglas
Site Manager, LPST CAPM No.00758

SITE ASSESSMENT — Worksheet E

LPST ID: 104626
Site Name: Randolph Air Force Base
Site Location: Randolph, Texas

EXECUTIVE SUMMARY

Check all applicable boxes.

UST/AST System Status: ■ Active ☐ Permanently Removed from Service
☐ Temporarily Out of Service ☐ Temporarily Indefinitely Out of Service (Variance Due Date:_____)

Current site land use:
☐ vacant ☐ indus./coml. ☐ residential ☐ agricultural ☐ recreational ■ UST/AST Facility

Sources of Release: ☐ tank(s) ☐ piping ☐ spills ☐ dispenser ■ Other:Draining of water from tanks

Substance Released:
☐ gasoline ☐ diesel ☐ waste oil ☐ hydraulic fluid ☐ AV gas ■ jet fuel ☐ Other: _____

Site Assessment History:
■ Preliminary/LSA ☐ Groundwater Monitoring ■ Remedial Action ☐ Emergency Response

Affected environmental media: ☐ surficial soil (<2 ft. BGS) ■ soil (2 to 15 ft. BGS) ☐ soil (>15 ft. BGS)
☐ groundwater ☐ surface water ☐ air

Identified affected receptors: ☐ water wells ☐ basements/structures ☐ habitat ☐ building ☐ underground utilities ☐ surface water ☐ exposed contaminated soil ☐ Other Distance from site (ft.):None

Samples collected ■ yes ☐ no Abatement initiated: ■ yes ☐ no Type:*In situ* bioremediation

Identified potential receptors: ☐ water wells ☐ basements/structures ☐ habitat ☐ building ☐ underground utilities ☐ surface water ☐ exposed contaminated soil ☐ Other Distance from site (ft.):None

Depth to first encountered groundwater (ft.) BGS: ☐ >50 ■ 15-50 ☐ 0-15; discontinuous

Presence of NAPLs (ft.):
☐ sheen ☐ 0.1-0.5 ft. ☐ 0.5-2 ft. ☐ 2-5 ft. ☐ >5 ft. ■ none Recovery Initiated: ☐ yes ☐ no N/A

Current NAPL extent: ☐ on-site ☐ off-site N/A

Dissolved-phase extent: ☐ on-site ☐ off-site ☐ unknown N/A

Groundwater beneficial use category:
☐ Cat. I ☐ Cat. II ☐ Cat. III ■ Cat. IV ☐ Soils only affected, regional beneficial use can not be established.

Contaminants of Concern Exceed Target Concentrations of Affected media:

Soil (Worksheets 7.0, 11.1-5):	☐ yes ■ no
Groundwater (Worksheet 8 & 11.1-4):	☐ yes ■ no
Vapors (Worksheet 9.0):	☐ yes ■ no
Surface Water (Worksheet 10.0):	☐ yes ■ no

Site Priority: 1._____ 2._____ 3._____ 4._X_

Recommended Actions:

☐ a) Affected Receptors Identified - Propose additional corrective action and/or monitoring program.

■ b) Site does not exceed Plan A criteria - Submit site closure request form.

☐ c) Site does not exceed Plan A criteria - Propose verification groundwater monitoring program.

☐ d) Site exceeds Plan A criteria - Propose corrective action to achieve Plan A criteria.

☐ e) Site exceeds Plan A criteria - Propose Plan B risk assessment and/or evaluation.

LPST ID: 104626

SITE DESCRIPTION

Location Description

Facility Name: Randolph Air Force Base

Address: Jet Fuel Storage Tank #20

Cross-Street: Fourth Street West

City: Randolph Air Force Base

County: Bexar

Current Site Water Supply: Edwards Aquifer

Notes: Tank #20 is a 420,000 gallon tank measuring 32 feet high by 50 feet in diameter. It is currently used to store JP-4 jet fuel. A containment system consisting of a synthethic liner and concrete apron were constructed at the tank site in 1994 to support the existing earthen dike.

Topography

Terrain: ■ Flat ☐ Steep ☐ Variable

Ground Surface Slope
Direction_____ Grade (ft./ft.)___

Other Comments:

Discuss any significant onsite or adjacent significant topographic feature.

Local Climate:

Average Annual Rainfall (in.): 28

Within 100 Year Floodplain: ☐ yes / ■ no

Other Comments:

Discuss recent (i.e., within the past year) extreme climatic changes. Discuss engineered modifications to floodplain status or designation.

The tank is surrounded by a 4-foot high containment berm.

LPST ID: 104626

LAND USE

PAST, CURRENT, AND FUTURE USE (check all that apply)

■ Past use of site:
- ☐ Commercial/Industrial
- ☐ Residential
- ☐ Agricultural
- ☐ Recreational
- ☐ Vacant
- ■ UST/AST Facility

■ Past Predominant Land Use of the Area:
- ■ Commercial/Industrial
- ☐ Residential

Describe: Tank farm for supplying flight operations at Randolph Air Force Base.

■ Current use of site:

of the Area:
- ■ Commercial/Industrial
- ☐ Residential
- ☐ Agricultural
- ☐ Recreational
- ☐ Vacant
- ■ UST/AST Facility

■ Current Predominant Land Use
- ☐ Commercial/Industrial
- ☐ Residential

■ Type of Residential Area:
- ☐ Minority/Low Income ☐ Non-minority/Low Income
- ☐ Other

Describe: _____

■ Future use of site:
- ☐ Commercial/Industrial
- ☐ Residential
- ☐ Agricultural
- ☐ Recreational
- ☐ Vacant
- ■ UST/AST Facility

■ Future Predominant Land Use of the Area:
- ☐ Commercial/Industrial
- ☐ Residential

Describe: Tank #20 is a 42,000 gallon tank currently used to store JP-8. No change foreseen.

List all facilities (not limited to PST regulated) within 500 feet of the site that could be a source of contaminants:

Other Comments:

Facility Name & Type: Randolph AFB

WATER WELL INVENTORY

SUMMARY OF WELLS WITHIN 0.5 MILE RADIUS OF THE SITE

			Downgradient Direction		
	Total No.	Active No.	Total No.	Active No.	No. Screened in Affected Zone
Public/Municipal:	2	2	0	0	0
Industrial:					
Domestic:					
Agricultural:	1	1	0	0	0
Observation: (Destroyed)	1	0			

POTENTIAL RECEPTOR POINTS

	Closest Downgradient Water Well	Closest Downgradient Well Screened Within Affected Zone
Well No./Designation:	None within 500 feet	None
Distance from Site (ft.):	NA	NA
Total Well Depth (ft.):	NA	NA
Current Use of Water:	NA	NA
Screened Interval below Ground Surface (ft):	NA	NA
Year Constructed:	NA	NA

(No wells listed above.)

Comments: *(Include discussion of any ordinances which prevent or influence the future installation of water wells at the site or surrounding area.)*

Affected groundwater is perched, discontinuous zone.

LPST ID: 104626

RECEPTOR SURVEY

Underground Utility Survey

Nearest Underground Utility
Name: Tank 1041 No. 20
Type: Fuel transfer lines
Depth of Utility: 4.0'
Distance & Direction
From Affected Zone: Refer to Attachment 1

Nearest Downgradient Utility
Name: Tank 1040 No. 21
Type: Fuel transfer lines
Depth of Utility: 4.0'
Distance & Direction
From Affected Zone: Refer to Attachment 1

Other Comments:

Discuss other receptors and indicate on Attachment 2. If affected discuss abatement measures.

Underground fuel transfer pipelines

Building Survey

Nearest Building
Name: Building 1042
Type: Utility
Distance & Direction
From Affected Zone: 200' south

Nearest Downgradient Building
Name: Undetermined
Type:
Distance & Direction
From Affected Zone:

Other Comments:

Discuss nearest and other receptors and indicate on Attachment 2. Buildings should include residences, schools, day care facility, nursing home, etc.

Building 1042 contains no basement.

A building is currently under construction northeast of the site within 500 feet of LPST 104626. The planned use of the building is NCO CLUB.

Surface Water Hydrology

Nearest Surface Water
Name: None
Type: N/A
Distance & Direction
From Affected Zone: N/A

Impacted Surface Water
Name: None
Type: N/A
Distance & Direction
From Affected Zone: N/A

Nearest Downgradient Surface Water
Name: None
Type: N/A
Distance & Direction
From Affected Zone: N/A

Other Comments:

If affected complete Worksheet 10.0. Describe potential for affected storm water or groundwater discharge to surface water feature.

LPST ID: 104626

HABITAT SURVEY

Presence of Sensitive Habitat

Site located within or affects a sensitive or protected habitat? ☐ yes (explain below) ■ no

Name: _____

Location: _____

Discussion: *Provide the habitat type (wildlife sanctuary, wetlands, etc.), condition, regulatory authority, and other information relative to habitat characterization.*

SUMMARY AND RECOMMENDED ACTION

Observed or Potential Impacts	-	Recommended Action
■ None observed or anticipated	-	No action required
☐ Potential for Significant Impact	-	Additional Corrective Action Required (See Attachment 20)
☐ Significant Impact Observed	-	Additional Corrective Action Required (See Attachment 20)

Comments: *Discuss any emergency abatement and continued corrective action.*

Corrective actions to date have included installation and sampling of groundwater monitoring wells and soil borings to define extent of subsurface contamination and to determine impacts, if any, of contaminants on groundwater. A bioventing system was installed in 1992 and has been continuously operating since installation to accelerate bioremediation of petroleum hydrocarbon contamination.

LPST ID: 104626

SITE ASSESSMENT HISTORY

SUMMARY OF PREVIOUS SITE ACTIVITIES

Typical site activities to be recorded include:
- Preliminary/Limited/Comprehensive Site Assessment
- Emergency Response • Risk/Exposure Assessment • Remedial/Corrective Actions

Types of sampling to be included: • Soil • Groundwater • Surface Water • Vapors

Date Completed	Description of Activity	Sampling and Testing	Result/Impact/Target Cleanup
9/92	Site Assessment. Drilled eight borings and installed three monitoring wells (two of which are dry wells.)	Collected soil samples in all borings and collected one groundwater sample.	Soil contamination occurs mostly from surface to 12.0 feet BGS. Water has not been impacted.
5/93	Bioventing Pilot Test. Installed three vent wells, three monitoring points, and one blower.	Collected soil samples and initial soil gas samples. Conducted air permeability and respiration tests.	Initial soil gas results indicated that biological fuel degradation has depleted the oxygen supply in the soil vadose zone. Bioventing testing indicated that air injection would be a good method for accelerating bioremediation of hydrocarbon contamination.
5/94	1-Year Bioventing Test. Collected soil gas samles and conducted an *in situ* respiration test. Performed system maintenance.	Collected soil gas samples. Performed bioventing system checks. Compared initial soil gas and *in situ* respiration results to the 1-year results.	TVH concentrations had fallen and respiration rates have dropped, but O_2 consumption was still observed, indicating that organic contaminants may still be present in subsurface soils and that biodegradation is still occurring.
5/96	Extended Bioventing Test. Collected soil gas samples and conducted an *in situ* respiration test.	Collected soil gas samples. Performed bioventing system checks. Compared results of the initial and 1-year soil gas and *in situ* respiration results to results from extended tests.	Respiration rates have slowed to near background levels and TVH levels are near nondetectable levels.

LPST ID: 104626

UST/AST SYSTEM CHARACTERIZATION

Release Information

UST/AST System Status:
■ Active ☐ Permanently Removed From Service
☐ Temporarily Out of Service
☐ Temporarily/Indefinitely Out of Service (Due Date:___)

Method of release discovery:
☐ UST Removal ☐ Release Detection Equipment
☐ Divestiture Assessment ☐ Inventory Control
☐ System Tightness Testing ■ Other_____

Substance released (check all that apply):
☐ Gasoline ☐ Diesel ☐ Waste Oil
☐ AV Gas ■ Jet Fuel ☐ Hydraulic Fluid
☐ Other_____

Source of release(s): Date Discovered:
☐ Spills/overfills _____
☐ Piping _____
☐ Dispenser _____
☐ Tank _____
■ Other Draining of water condensation from tanks

Other Comments:

Describe the measures taken to abate the release:

Brief Chronology of Events

08/27/92 EEI installed 4 soil borings (B1, B2, B3, B4) around tank #21

08/28/92 EEI installed 5 soil borings (B5, B6, B7, B8, B9) around tank #20

09/01/92 Laboratory analyses of the soil core samples collected from the soil borings around tank #21 (B1, B2, B3, B4) indicated TPH concentrations ranging from nondetectable to 190 ppm.

09/02/92 Laboratory analyses of the soil core samples collected from the soil borings around tank #20 (B5, B6, B7, B8, B9) indicated TPH concentrations ranging from 24 ppm to 1100 ppm.

09/10/92 TWC (William Ryan) was notified of the release. Installed bioventing system, upgraded containment area.

Removal Information

Date(s) of removal(s): N/A
Type of removal:
☐ Removal from the ground ☐ Closure in place
Water in tankhold during excavation? ☐ yes ☐ no
Depth of water in tankhold (BGS):
☐ <5 ft. ☐ 5-10 ft. ☐ 11-15 ft. ☐ None
NAPL: ☐ yes ☐ no Thickness (ft.): _____
Water Evacuated from tankhold: ☐ yes ☐ no
Volume (gal.): _____
Groundwater recharged into tankhold: ☐ yes ☐ no
Depth (ft. BGS): _____
Status of excavation(s):
☐ Open with water ☐ Open/dry
☐ Backfilled with impervious cover
☐ Backfilled with no impervious cover
Type of fill material:
☐ Untreated backfill ☐ Treated backfill
☐ Other
☐ Clean fill - gravel ☐ Clean fill - sandy/clay

Other Comments:

Provide the maximum contaminant concentrations milligrams per kilograms (mg/kg) of untreated backfill returned to the tankhold(s): Benzene____ TEX____ TPH____ OTHER___. If a new UST/AST system was installed describe & indicate on Attachment 1.

N/A

Maximum level of contamination detected in native soils upon completion of removal/repair (mg/kg):

Chemical of Concern	Sample Date	Sample Location/Depth	Laboratory Method Detection Limit	Maximum Concentration (mg/kg)
Benzene	N/A			
Toluene	N/A			
Ethylbenzene	N/A			
Total Xylenes	N/A			
TPH	N/A			
Metals	N/A			
VOC	N/A			
Other_____	N/A			

LPST ID: 104626

SOIL ASSESSMENT

SOIL DATA COLLECTION AND EVALUATION

Number of soil sampling points: 27 soil samples from 12 borings

Method of determination: ☐ Direct Push ■ Borings ☐ Other: _____

Surface cover over affected soil zone (check all that apply):
■ Concrete ■ Asphalt ☐ Gravel ☐ Dirt ☐ Grass ☐ Other: _____

Percent of affected soil zone covered with impervious cover:
☐ 0-25 % ☐ 25-50 % ☐ 50-75 % ■ 75-100%

If there is no impervious surface cover, is there public access to the affected surface (0-2 ft.) soil? ☐ yes ■ no

Affected soil zone thickness (ft.): 7.5 ft

*Affected soil zone surface area dimensions (ft.): 60 ft radius

Maximum depth of contamination exceeding appropriate Plan A risk-based levels: N/A ft. BGS

*Estimated volume of soil exceeding Plan A target concentration (yd^3): 0.0

*Minimum distance from affected soil zone to property boundary: ☐ 0-10 ft. ☐ 10-50 ft. ☐ 50-100 ft.
■ 100-300 ft. ☐ 300-500 ft. ☐ >500 ft. ☐ Extends beyond property boundary

Waste disposal: ☐ Landfill ■ On-site treatment ☐ Off-site treatment
☐ Other ☐ Pending ☐ None

Maximum level of contamination detected in native soils (mg/kg):

Chemical of Concern	Sample Date	Sample Depth (ft.)	Sample ID	Laboratory Method Detection Limit	Max Conc. (mg/kg)	Target Cleanup Goals †
Benzene	8/27/92	9.0 ft	B1-9	mg/kg	<0.4	6.3
Toluene	8/27/92	9.0 ft	B1-9	mg/kg	0.4	3257
Ethylbenzene	3/18/93	1.0 ft	MPA	mg/kg	13.0	3357
Total Xylenes	3/18/93	1.0 ft	MPA	mg/kg	130.0	968
TPH	8/28/92	2.0 ft	B8-2	mg/kg	1100.0	N/A
Total Lead	8/28/92	3.0 ft	B6-3	mg/kg	21.0	
Naphthalene					99.0	
Other_____						
Other_____						

* Beyond the minimal requirements for a Site Assessment as defined by 30 TAC 334.
† Refer to Worksheets 11.1-5 and *Risk-Based Corrective Action for Leaking Storage Tank Sites*, RG-36, Table A-1.

LPST ID: 104626

* Geotechnical soil parameters:

Parameter	Result	Depth	Location/Sample ID	Method of Determination
Dry Bulk Density (g/m^3):				not tested
Effective Porosity (%):				not tested
Fraction Organic Carbon (g/g):				not tested
Intrinsic Permeability (cm^2):				not tested
Water Content (cm^3/cm^3):				
Other				

* Biodegradation Indicators:

Present spatial distribution of O_2, CO_2, CH_4, etc. levels on map. (Attachment 9)

Soil Inorganics	VW1-1	MPA-1	MPA-9.5	MPB-5
Iron (mg/kg)	6,060	13,600	14,500	15,500
Alkalinity (mg/kg as $CaCO_3$)	400	240	400	330
pH (mg/kg)	8.0	8.1	7.9	8.2
TKN (mg/kg	180	650	90	ND
Phosphates (mg/kg)	810	1,200	1,100	580
Soil Physical Parameters	**VW1-1**	**MPA-1**	**MPA-9.5**	**MPB-5**
Moisture (% wt.)	9.4	6.7	16.9	14.0
Gravel (%)	43	55	0	44
Sand (%)	38	10	2	35
Silt (%)	9	20	50	17
Clay (%)	10	15	48	4
Soil Temperature (°F)	**MPA-3**	**MPA-12**		
	59.8	64.8		

[a]/TRPH - total recoverable petroleum hydrocarbons; mg/kg = milligrams per kilogram; TVH = total volatile hydrocarbons; ppmv = parts per million, volume per volume; $CaCO_3$ = calcium carbonate; TKN = total Kjeldahl nitrogen, °F = degrees Fahrenheit.

[b]/ND = not detected.

LPST ID:104626

GROUNDWATER ASSESSMENT

GROUNDWATER DATA AND EVALUATION

Groundwater affected by release: ☐ yes ■ no (If no, complete only the Beneficial Groundwater Use Categories on this Worksheet.)

Site Hydrogeology	Upper Most Zone	Other
Depth to groundwater (ft.)	20 feet	
Aquifer type (Perched, confined, unconfined)	Perched	
*Estimated Aquifer thickness (ft.)	Unknown	
*Water level fluctuations (± ft.)	Unknown	
Gradient (ft./ft.)/Direction	Unknown	
*Saturated hydraulic conductivity (ft./day)	Unknown	
*Approximate well yield (gpd)	Unknown	
Lithology	Clayey to sandy silt	
Geologic Formation	Swficia	
Major/minor aquifer name	None	
Total dissolved solids (mg/ℓ)	572	
Confining layer depth (ft. BGS)	N/A	
Confining layer thickness (ft.)	N/A	

Beneficial Groundwater Use Categories

Mark the potential beneficial use category for the impacted zone and indicate the selection criteria. Complete the appropiate worksheet (11.1-5) for the Category indicated.

☐ Category I	☐ Category II	☐ Category III	■ Category IV
☐ Impacted or threatened water supply well(s)‡	☐ Affected groundwater zone TDS <3,000 ppm, and no beneficial use† is documented within 0.5 miles of the site.	☐ Affected groundwater zone TDS 3,000 - 10,000 ppm, and no beneficial use† within 0.5 miles of the site.	☐ Affected groundwater zone TDS >10,000 ppm, and no beneficial use† is documented within 0.5 miles of the site.
OR ☐ Affected groundwater zone TDS <3,000 ppm, and water well(s)‡ or water supply spring within 0.5 miles of the site. OR ☐ Soils only affected. Regional groundwater beneficial use† cannot be established.	OR ☐ TDS 3,000 - 10,000 ppm, and beneficial use† is documented within the 0.5 miles of the site.		OR ■ Well yield <150 gpd (i.e., affected zone is not considered to have a beneficial use†)

‡ If construction details of water well(s) are unknown or can not be proven, the interval is assumed to be connected.
† Applies to a drinking water source producing from the same or connected interval as the affected groundwater zone.

Groundwater Sampling Points

	On-Site (provide well ID)	*Beyond Property Boundary (provide well ID)
Number of Sampling points:	1 MW13	
Number of permanent monitoring wells:	3 (2 are dry)	
Static water levels above screened intervals: ☐ yes ■ no		

LPST ID:104626

DISSOLVED-PHASE PLUME

*Aerial extent of dissolved-phase plume (ft²): N/A

*Distance from edge of plume to property boundary if on-site: ☐ <10 ft. ☐ 10-50 ft. ☐ 50-100 ft. ☐ 100-300 ft. ☐ >300 ft.

*Distance from property boundary to edge of plume if off-site: ☐ <10 ft. ☐ 10-50 ft. ☐ 50-100 ft. ☐ 100-300 ft. ☐ >300 ft.

Maximum level of contamination detected in groundwater (mg/ℓ):

Contaminant	Sample Date	Sample ID	Laboratory Method Detection Limit	Maximum Concentration (mg/ℓ)	Target Cleanup Goals†
Benzene	9/22/92	MW13	PPM	0.200	N/A
Toluene	9/22/92	MW13	PPM	<.001	N/A
Ethylbenzene	9/22/92	MW13	PPM	0.006	N/A
Total Xylenes	9/22/92	MW13	PPM	<.001	N/A
MTBE					
TPH	9/22/92	MW13	PPM	4.9	
Naphthalene					
Other_____					

† Refer to Worksheet 11.1-3 and the *Risk-Based Correction Action for Leaking Storage Tank Sites*, RG-36, Table A1.

†† No target groundwater concentrations listed for beneficial use category IV groundwater.

NAPL PLUME

NAPL Present? ☐ yes ■ no

	On-Site (provide well ID)	Thickness (ft.)	*Beyond Property Boundary (provide well ID)	Thickness (ft.)
Current maximum NAPL thickness (ft.):	N/A	N/A	N/A	N/A

NAPL recovery method: ☐ hand bail ☐ passive skimmer ☐ sorbent socks ☐ automated system ■ none

Volume recovered to date (gals.): N/A

*Aerial extent of NAPL plume: (ft²) N/A ☐ beyond property boundary

*Distance from edge of NAPL plume to property boundary if on-site: ☐ <10 ft. ☐ 10-50 ft. ☐ 50-100 ft. ☐ 100-300 ft. ☐ >300 ft.

*Distance from edge of NAPL plume from property boundary if off-site: ☐ <10 ft. ☐ 10-50 ft. ☐ 50-75 ft. ☐ 75-100 ft. ☐ >100 ft.

* Biodegradation Indicators:

Present spatial distribution of dissolved Oxygen, dissolved CO_2, dissolved CH_4, Fe, SO_4, or other alternate electron acceptors on isoconcentration map. (Attachment 9)

LPST ID: 104626

VAPOR ASSESSMENT

VAPOR DATA AND EVALUATION

Known vapor impact: ☐ yes ■ no

Location: ☐ ambient air ☐ utilities ☐ residences
☐ hospital ☐ school/day care ☐ commercial buildings ☐ other:_____

Lower Explosive Limit (LEL) concentrations: ■ not measured ☐ measured ☐ calculated[1]

NAPL present or soil concentration near saturation (for calculating soil vapor concentrations, refer to *Risk-Based Correction Action for Leaking Storage Tank Sites*, RG-36): ☐ yes ■ no Depth (ft. BGS):_____

Vapor monitoring data:

Sample No.	Location	Depth	% LEL	Total Organic Vapors (ppmv)	Benzene (ppmv)	Other

If vapor concentrations exceed 25% of the LEL or other potential for explosive vapor exist in surface or subsurface structure, describe affected area, methods of determination, and any abatement measure. Identify and discuss any occupational or indoor air exposures to released contaminants. Provide all calculations for the determination of the target concentrations:

See attachment 15(c) for soil gas testing results.

[1]LEL% should reflect whole mixture evaluation. If more than one compound is present, actual measurement of vapors will typically be warranted.

LPST ID: 104626

SURFACE WATER ASSESSMENT

SURFACE WATER DATA AND EVALUATION

Surface water(s) affected: ☐ yes ■ no Name:_____ Type:_____
Name:_____ Type:_____

NAPL present on surface water or run off: ☐ yes ☐ no

NAPL recovery method: ☐ passive skimmer ☐ sorbent socks ☐ automated system ☐ booms ☐ other _____ ■ none

Volumes recovered to date (gals.): N/A

Aerial extent of NAPL plume (ft.²): N/A

Uses of affected surface water: ☐ drinking water ☐ contact recreation ☐ habitat for endangered species ☐ agriculture

Is a public or domestic surface water intake impacted? ☐ yes ■ no

If impacted lake or pond, indicate affected surface area (ft.²): N/A

Average depth of surface water (ft.): N/A

Maximum level of contamination detected in surface water (mg/ℓ):

Contaminant	Sample Date	Sample Location & ID	Laboratory Method Detection Limit	Maximum Concentration (mg/ℓ)	Target Cleanup Goals†
Benzene	N/A				
Toluene	N/A				
Ethylbenzene	N/A				
Total Xylenes	N/A				
MTBE	N/A				
TPH	N/A				
Naphthalene	N/A				
Other_____	N/A				
Other_____	N/A				

† Refer to 30 TAC, Chapter 307, the MCL or the *Risk-Based Correction Action for Leaking Storage Tank Sites*, RG-36.

Describe affected area, methods of determination and any abatement measures. Discuss the migration pathway between the source of contamination and the surface water body.

PLAN A EVALUATION

CATEGORY IV: Soil Target Cleanup Level Determination

- Complete this worksheet for Category IV sites. Check the appropriate column indicating the predominant land use and surface cover.
- Indicate the maximum detected soil concentration for the chemical of concern in the column checked. Check the box for each compound that exceeds the target concentration. If any boxes are checked, further corrective action will be required.
- Dermal exposure should be calculated if depth to groundwater is <15 feet, unless documentation can be provided that surface cover will be maintained and/or construction practices will not encroach upon groundwater[a]. For dermal exposure calculations refer to Chapter 10 of *Dermal Exposure Assessment, Principles and Applications (Interim Report)*, EPA/600/8-91/011B.NTIS PB92205665. Attach and provide all dermal exposure assessment calculations. Provide tables which include result and maximum detected concentrations.
- If other chemicals of concern are present but not listed, refer to *Risk-Based Corrective Action for Leaking Storage Tank Sites (RG-36).*

PLAN A EVALUATION

EQUILIBRIUM PARTITION EQUATION

- Use this section to determine the target soil concentrations protective of groundwater (C_T).

The C_T value may be calculated for each chemical of concern under the following conditions:

- the option is provided on the appropriate column of the site specific category worksheet;
- default target concentration was exceeded;
- site specific soil parameters have been collected.

- Provide all calculations for each chemical of concern.

PARAMETERS	REFERENCE VALUES USED TO CALCULATE DEFAULT TARGET CONCENTRATION	SITE SPECIFIC VALUES
C_w = Category I groundwater target concentration (chemical specific) (mg/ℓ)	*Reference worksheet 11.1 for chemical specific category I target concentration.*	
ρ_s = Dry Soil bulk density (g-soil/cm^3-soil)	1.8	
θ_w = Water content (cm^3-H_2O/cm^3-soil)	0.1	
θa = Air content (cm^3-air/cm^3-soil)	0.22	
f_{oc} = Faction of organic carbon (g-C/g-soil)	0.002	
K_{oc} = Carbon-Water sorption coefficient (chemical specific) (g-H_2O/g-soil)	*Reference RG-36, page 55, Table B-1 for chemical specific values.*	
K_d = Soil-Water sorption coefficient = $K_{oc} \times f_{oc}$		
H′ = Unitless form of Henry's law constant H x 41.57 (at 25°C)	*Reference RG-36 page 55*	
C_l = Leachate Concentration Dilution Factor = 100	= Dilution Factor x C_W	

Use this equation to determine the target soil concentration which is protective of groundwater for each chemical of concern. Use site specific geotechnical parameters to calculate C_T. (Use referenced default values for any parameters not analyzed.)

C_T = Target soil concentration protective of groundwater determined by the equilibrium partition equation

$$C_T = \frac{\left(C_l \times \left[\rho_s K_d + \theta_w + \theta_a H'\right]\right)}{\rho_s}$$

LPST ID: 104626

SITE PRIORITIZATION

PRIORITY 1 SITES

NAPL present? ☐ yes ☐ no Evaluate all information on site soils, vapors, groundwater, surface water, and other impacts and check all boxes which match site conditions. The lowest value is the site priority. If priority cannot be determined, the assessment is inadequate.

	PRIORITY	ACTIONS
☐ 1.1	Explosive levels, or concentrations of vapors that could cause acute health effects are present in a residence or other building. (Ensure the local fire authority or State Fire Marshal (512/918-7100) and the local TNRCC Region Office have been notified.)	**Emergency Actions:** Notify appropriate authorities, property owners, and potentially affected parties. Mitigate vapor impact. **Additional Actions:** Conduct receptor survey. Conduct assessment of contaminant plumes. Determine target cleanup levels. Conduct remediation as necessary.
☐ 1.2	An active public water supply well, public water supply line, or public surface water intake is affected or immediately threatened by the release. (Ensure the public authority and the local TNRCC Region Office have been notified.)	**Emergency Actions:** Notify appropriate authorities, well users, and property owners. Prevent further migration. Mitigate impact. Discontinue use of water supply. **Additional Actions:** Provide alternative water source†. Conduct receptor survey. Conduct assessment of contaminant plumes in relation to water supply impact. Determine target cleanup levels. Conduct remediation as necessary.
☐ 1.3	A sole-source domestic water supply well or line, or sole-source domestic surface water intake is affected or immediately threatened by the release. (Ensure the well user or surface water user and the local TNRCC Region Office have been notified.)	**Emergency Actions:** Notify appropriate authorities, well users, and property owners. Prevent further migration. Mitigate impact. Discontinue use of water supply. **Additional Actions:** Provide alternative water source†. Conduct receptor survey. Conduct assessment of contaminant plumes in relation to water supply impact. Determine target cleanup levels. Conduct remediation as necessary.
☐ 1.4	Explosive vapors are present in a subsurface utility system, but no building or residence is affected. (Ensure the utility authority and the local TNRCC Region Office have been notified.)	**Emergency Actions:** Notify appropriate authorities, property owners, and affected parties. Mitigate vapor impact. **Additional Actions:** Conduct receptor survey. Conduct assessment of contaminant plumes. Determine target cleanup levels. Conduct remediation as necessary.
☐ 1.5	NAPL is present at the ground surface, on surface water bodies, surface water runoff, or in utilities other than water supply lines. (Ensure the utility authority is notified if utilities are affected. Ensure NAPL is removed as required pursuant to 30 TAC 334.79.)	**Emergency Actions:** Notify appropriate authorities, property owners, and affected parties. Secure area. **Additional Actions:** Conduct NAPL removal activities. Prevent migration of NAPL. Conduct assessment in relation to impact. Conduct receptor survey. Determine target cleanup levels. Conduct remediation as necessary.
☐ 1.6	The Edwards aquifer, recharge zone or transition zone is affected.	**Emergency Actions:** Recover NAPL if present. **Additional Actions:** Initiate assessment activities. Conduct assessment in relation to impact. Conduct receptor survey. Determine target cleanup levels. Conduct remediation as necessary. If NAPL is present, conduct removal activities.
☐ 1.7	Concentrations of vapors/particulates that could cause acute health affects, or safety concerns are present in outdoor air.	**Emergency Actions:** Notify appropriate authorities, property owners, and affected parties. Mitigate immediate impacts. **Additional Actions:** Conduct sufficient assessment to determine exposure pathways, receptors and their locations, and target cleanup goals. If NAPL is present, conduct removal activities.

† Reimbursement is contingent upon 30 TAC 334.308 (c)(3).

LPST ID: 104626

PRIORITY 2 SITES

	PRIORITY	ACTIONS
☐ 2.1	Soils or water contaminated by the release are exposed and unsecured from public access and dwellings, playgrounds, parks, day care centers, schools, or similar use facilities are located within 500 feet of those soils.	Remove, cover, or otherwise secure exposed soils or water. Fill open excavations. Conduct actions necessary to contain contamination or prevent impact or exposure.
☐ 2.2	A former vapor impact is associated with this site, or NAPL is present in close proximity to subsurface utilities or other natural or man-made conduit and there is potential for the accumulation of explosive vapors or vapors that could cause acute effects in a building or other structure.	Remediate/remove vapors, NAPL, or contaminated soils. Determine migration pathways and remove/prevent migration pathways. Conduct assessment of contaminant plumes in relation to the potential vapor pathway. Determine target cleanup levels. Conduct actions necessary to contain contamination or prevent impact or exposure.
☐ 2.3	A domestic water supply well or line, or a domestic surface water intake is affected or immediately threatened by the release, but the user has access to another public or private water supply. (Ensure the user and the local TNRCC Region Office have been notified.)	Notify proper authorities, users, and property owners. Prevent migration to water intake. Provide alternative water supply if necessary. Conduct assessment to identify contaminant plumes and exposure pathways in relation to water intake. Determine appropriate target cleanup goals based on site conditions. Conduct actions necessary to contain contamination or prevent impact or exposure.
☐ 2.4	A non-public or non-domestic water supply well is affected or immediately threatened. (Do not consider monitor wells.) (Ensure the user and the local TNRCC Region Office have been notified.)	Notify proper authorities, well users, and property owners. Prevent migration to water well. Provide alternative water supply if necessary. Plug water well if necessary. Conduct assessment to identify contaminant plumes and exposure pathways in relation to water well. Determine appropriate target cleanup goals based on site conditions. Conduct actions necessary to contain contamination or prevent impact or exposure.
☐ 2.5[1]	Groundwater is affected and a public or domestic water supply well is located within 0.25 miles of the UST/AST system or source area. (Check if a well is present, but the well use is unknown). (See footnote 1 before responding.)	Determine completion data and usage of well(s) if not already known. Conduct receptor survey to locate additional wells and other potential receptors (if not already done). Evaluate well impact potential. Determine appropriate cleanup goals based on site conditions. Conduct actions necessary to contain contamination or prevent impact or exposure.
☐ 2.6	Groundwater or storm water runoff is affected and discharges within 500 feet of the known extent of contamination to a surface water body used for human drinking water, contact recreation, habitat to a protected or listed endangered plant and animal species.	Conduct assessment which addresses the contaminant plumes in relation to the surface water. Determine target cleanup levels. Conduct actions necessary to contain contamination or prevent impact or exposure. Notify property owners if impact is documented.
☐ 2.7	A public or domestic water supply well that produces from a groundwater zone which is not affected or threatened is located within the known extent of contamination. (Check if a well is present, but the well use is unknown.)	Notify well users and property owners. Determine completion data and usage of water well(s). Conduct receptor survey to locate additional sensitive receptors. Investigate well impact or cross-contamination potential. Plug well(s) if necessary. Determine target cleanup levels. Conduct actions necessary to contain contamination or prevent impact or exposure. Monitor water well for groundwater quality.

LPST ID: 104626

PRIORITY 3 SITES

	PRIORITY	ACTIONS
☐ 3.1[1]	Groundwater is affected and a public or domestic water supply well is located between 0.25 and 0.5 miles from the UST/AST system or source area. (Check if a well is present in this interval, but the well use is unknown.) (See footnote 1 before responding.)	Determine completion data and usage of well(s) if not already known. Conduct receptor survey to locate additional wells and other potential receptors (if not already done). Evaluate well impact potential. Evaluate need for remediation.
☐ 3.2	Groundwater is affected and the affected groundwater zone may discharge between 500 feet and 0.25 miles of the UST/AST or source area to a surface water body used for human drinking water, contact recreation, or habitat to a protected or listed endangered plant and animal species.	Conduct assessment which evaluates potential to impact the surface water. Evaluate need for remediation.
☐ 3.3[1]	Groundwater is affected and a non-public or non-domestic water supply well is located within 0.25 miles of the UST/AST system or source area. (See footnote 1 before responding.)	Determine completion data and usage of well(s) if not already known. Conduct receptor survey to locate additional wells and other potential receptors (if not already done). Monitor water well for groundwater quality. Evaluate need for remediation.
☐ 3.4	A non-community or non-domestic water supply well that produces from a groundwater zone which is not affected or threatened is located within the known extent of contamination. (If a well is present, but the use of the well is unknown, check 2.7 instead.)	Notify well users and property owners. Determine completion data and usage of well(s) if not already known. Conduct receptor survey to locate additional wells and other potential receptors (if not already done). Investigate well impact or cross-contamination potential. Monitor water well for groundwater quality. Evaluate need for remediation.
☐ 3.5[2]	A designated major or minor groundwater aquifer is affected or immediately threatened. (See footnote 2 before responding.)	Conduct assessment of soil and groundwater contaminant plumes in relation to major or minor aquifer. Conduct receptor survey and water well inventory. Evaluate need for remediation.

PRIORITY 4 SITES

	PRIORITY	ACTIONS
☐ 4.1	Groundwater is affected.	Conduct assessment of soil and groundwater contaminant plumes. Conduct receptor survey and water well inventory. Evaluate site conditions to determine need for additional corrective actions.
■ 4.2	The vertical extent of contamination has been defined and the assessment results document that groundwater is not affected.	Conduct assessment of soil contaminant plume. Conduct receptor survey and water well inventory. Evaluate site conditions to determine need for additional corrective actions.

1. Consider only wells producing from the same interval as the affected groundwater zone at the release site, wells which may provide a cross-contamination pathway, or wells where completion details are unknown.

2. Refer to Major and Minor Aquifers of Texas Maps prepared by Texas Water Development Board, September 1990. Do not consider the low permeability Beaumont clays of the Beaumont Formation for the Gulf Coast aquifer. Do not consider a perched groundwater zone overlaying the principal producing portion of the aquifer unless the two are hydrologically connected.

Re: AIC #02-0007977
1/2 Mile Water Well Search
Randolph AFB
Bexar County, Texas

Dear Mr. Veltri,

Agency Information Consultants, Inc. (AIC) has performed a water well search within the area delineated on the attached map. The following steps were utilized by AIC for this project:

1. Transferred all "located" and "plotted" water well data from the (Texas Water Development Board) TWDB county highway maps onto the map provided by AIC within the Area Of Review (AOR).

2. Transferred all "located" water well data from the TWDB United States Geological Survey (USGS) 7.5 minute topographic maps within the AOR onto the map provided by AIC.

3. Obtained copies of the "located" and "plotted" water well schedules/logs for the water wells found within the AOR at the Texas Water Commission (TWC) central records.

4. Obtained copies of the water well logs for the "partially" numbered water wells which were found to be within the AOR.

The following is a brief explanation of terms:

Located water wells - wells whose sites have been verified in person by a TWDB or USGS staff member and spotted on a map at the TWDB.

Plotted water wells - wells whose sites have been determined from the information submitted on the water well logs and subsequently spotted on a TWDB county highway map by a TWDB staff member. Since June of 1986, the TWDB has stopped mapping these wells.

Partially numbered water wells - wells whose logs have been processed since June of 1986. These wells are given a State ID Number which establish it within a 2.5 minute quad.

AIC identified 9 water wells within your area of review. There are 7 located water wells, 1 plotted water well and 1 partially numbered water well. The following is a listing of the wells found.

LOCATED WATER WELLS
State ID Number
68-30-612
-613
-614
-615
-616
-808
-809

PLOTTED WATER WELLS
State ID Number
68-30-8B

PARTIALLY NUMBERED WATER WELLS
State ID Number
68-30-5(1) Location Unknown

Note: Frequently, there is more than one water well per State ID Number, due to a large concentration of wells. If greater than one, each State ID Number will be listed out to the right of the column. The records for wells which share a common State ID Number will be found stapled together.

AIC's research of water wells within the AOR was performed by an examination of the maps at the TWDB and the files within the TWC central records. Due to the fact that some water well schedules were never submitted by drillers and the unaccountability of privately drilled water wells, AIC is unable to provide 100% of the data in the AOR.

If you have any questions regarding this project or any future projects please call me at 512-478-8991.

Sincerely,

Joye Haun
Research Consultant

IMPORTANT NOTICE FOR PERSONS HAVING WELLS DRILLED CONCERNING PRIVILEGE OF CONFIDENTIALITY

The Water Well Drillers Board and the Texas Water Commission are concerned that some persons having wells drilled may not be aware of the confidentiality privilege provision of Section 5 of the Water Well Drillers Act. Section 5, the Reporting of Well Logs, reads as follows:

> "Every licensed water well driller drilling, deepening or otherwise altering a water well within this State shall make and keep, or cause to be made and kept, a legible and accurate well log, and within 60 days from the completion or cessation of drilling, deepening or otherwise altering such a water well, shall deliver or transmit by certified mail a copy of such well log to the Commission, and the owner thereof or the person having had such well drilled. Each copy of a well log, other than a Commission copy, shall include the name, mailing address, and telephone number of the Board and the Commission. The well log required herein shall at the request in writing to the Commission, by certified mail, by the owner or the person having such well drilled be held as confidential matter and not made of public record."

The last sentence specifies the means whereby you can, if you wish, assure that logs of your wells will be kept confidential.

IMPORTANT NOTICE FOR PERSONS HAVING WELLS DRILLED CONCERNING PRIVILEGE OF CONFIDENTIALITY

The Water Well Drillers Board and the Texas Water Commission are concerned that some persons having wells drilled may not be aware of the confidentiality privilege provision of Section 5 of the Water Well Drillers Act. Section 5, the Reporting of Well Logs, reads as follows:

> "Every licensed water well driller drilling, deepening or otherwise altering a water well within this State shall make and keep, or cause to be made and kept, a legible and accurate well log, and within 60 days from the completion or cessation of drilling, deepening or otherwise altering such a water well, shall deliver or transmit by certified mail a copy of such well log to the Commission, and the owner thereof or the person having had such well drilled. Each copy of a well log, other than a Commission copy, shall include the name, mailing address, and telephone number of the Board and the Commission. The well log required herein shall at the request in writing to the Commission, by certified mail, by the owner or the person having such well drilled be held as confidential matter and not made of public record."

The last sentence specifies the means whereby you can, if you wish, assure that logs of your wells will be kept confidential.

REPORT OF LABORATORY ANALYSIS

May 3, 1993

Mr. Doug Downey
Engineering Science Inc.
1700 Broadway
Denver, CO 80290

RE: PACE Project No. 4908
Client Reference: AFCEE/Randolph

Dear Mr. Downey,

Enclosed is the report of laboratory analyses for samples received March 22, 1993.

If you have any questions concerning this report, please feel free to contact us.

Sincerely,

Tom Paulson
Project Manager

METALS DATA PACKAGE

CASE NARRATIVE
WORK ORDER NO. 4908
METALS

The serial dilution sample result for iron did not agree with the undiluted result within 10%, and the diluted result was greater than ten times the MDL for iron. All iron results in this batch are therefore flagged with "E".

Client ID's were abridged by the laboratory to facilitate computer entry of analytical data. The following should be used as a reference:

Jennifer Nelson

Jennifer A. Nelson
Project Manager

Please Note:
The LCS is a control sample of known, interferent free matrix that is analyzed using the same reagents, preparation and analytical methods employed for the samples. The LCS % recovery data is used for validation of sample batch results. Due to matrix effects, the QC limits for MS/MSD's are advisory only and are not used to accept or reject batch results.

SERVICE CONDITIONS, DECLARED VALUE AND LIMIT OF LIABILITY

Use of this airbill constitutes your agreement to the service conditions in our current Service Guide, available upon request. See back of sender's copy of this airbill for information. Service conditions may vary for Government Overnight Service. See U.S. Government Service Guide for details.

We will not be responsible for any claim in excess of $100 per package, whether the result of loss, damage, delay, non-delivery, misdelivery, or misinformation, unless you declare a higher value, pay an additional charge, and document your actual loss for a timely claim. Limitations found in the current Federal Express Service Guide apply. Your right to recover from Federal Express for any loss, including intrinsic value of the package, loss of sales, income interest, profit, attorney's fees, costs, and other forms of damage whether direct, incidental, consequential, or special is limited to the greater of $100 or the declared value specified to the left. Recovery cannot exceed actual documented loss. The maximum Declared Value for FedEx Letter and FedEx Pak packages is $100.00.

In the event of untimely delivery, Federal Express will at your request and with some limitations, refund all transportation charges paid. See Service Guide for further information.

Sender authorizes Federal Express to deliver this shipment without obtaining a delivery signature and shall indemnify and hold harmless Federal Express from any claims resulting therefrom.

Site Closure Request

TEXAS NATURAL RESOURCE CONSERVATION COMMISSION
PETROLEUM STORAGE TANK DIVISION

LPST SITE CLOSURE REQUEST FORM

is form is to be used to request closure for Leaking Petroleum Storage Tank (LPST) cases. The soil and groundwater cleanup als must be met prior to submitting this form. These cleanup goals should be derived from either:

- the TWC *Guidance Manual for LPST Cleanups in Texas*, January 1990 so long as these goals were achieved prior to November 8, 1995, or
- the TNRCC *Risk-Based Corrective Action for Leaking Storage Tank Sites* document, January 1994 (RG-36).

Submission of this Site Closure Request constitutes certification by the Responsible Party, Corrective Action Specialist (CAS), and Corrective Action Project Manager (CAPM) that all necessary corrective actions have been completed and final closure of the subject site is appropriate at this time. By signing this Site Closure Request, the Responsible Party, CAS, and CAPM acknowledges that no further corrective actions, with the exception of activities subsequently approved by the TNRCC, will be eligible for reimbursement after the RP's signature date. Although costs for activities such as groundwater monitoring or remediation system operation and maintenance may have been approved for an annual period, these activities should cease upon submission of the Site Closure Request as these activities will not be considered eligible for reimbursement beyond the date of the Site Closure Request. Additionally, any costs relating to site assessment or other corrective action activities will not be eligible for reimbursement if the activities are conducted after the date of the Site Closure Request, unless specifically approved by the TNRCC. If, upon review by the TNRCC, the TNRCC concurs that the site meets the conditions for final closure, the costs for closure activities necessary to restore the site to its original condition will be reviewed and approved as appropriate. If the TNRCC determines that the site does not meet the conditions for final closure, the TNRCC will request a workplan and cost proposal for the next appropriate corrective action activity necessary to proceed towards final closure unless appropriate activities have previously been approved. The only type of proposal that should be attached to the Site Closure Request is for site closure costs. Any proposals attached to the Site Closure Request for activities other than site closure will not be processed and will be withdrawn from consideration.

If any of the following apply, the site is not ready for closure and this form should not be submitted:

- **The appropriate LPST cleanup goals have not been met (a proposal for the next appropriate step should be submitted instead);**
- **Phase-separated hydrocarbons (>0.1 feet) currently exist at the site;**
- **The contaminant plume is increasing in size; or**
- **All wastes and other material generated from the site have not been properly disposed;**

Do not use this form:

- **if the release was not from a regulated underground or aboveground storage tank;**
- **for tank removal-from-service activities not associated with an LPST site (use the *Release Determination Report Form* (TNRCC-0621) or other appropriate format);**
- **for situations where the second set of confirmation samples collected during tank removal-from-service activities confirms suitability for closure (use the *Release Determination Report Form* (TNRCC-0621) or other appropriate format); or**
- **for shutdown of remediation systems or for plugging of monitor wells when site closure is not yet appropriate.**

If asked to initiate additional activities, submit a workplan and preapproval request for those activities on sites eligible for reimbursement. Please review the document entitled *Preapproval for Corrective Action Activities* (RG-111) for procedures on preapproval requests and the other PST guidance pamphlets and rules for additional information on LPST sites.

Complete all blanks and check "yes" or "no" for all inquiries. IF A COMPLETED *ASSESSMENT REPORT FORM* (TNRCC-0012) WAS PREVIOUSLY SUBMITTED, YOU DO NOT NEED TO ANSWER THE QUESTIONS WITHIN THE DARK OUTLINED AREAS UNLESS THE INFORMATION HAS CHANGED. If the question is not applicable to this site, indicate with N/A. If the answer to the question is unknown, please indicate. If space for supplemental information is needed, insert numbered footnote and provide brief supporting discussion in Section VI, Justification for Closure.

III. RELEASE ABATEMENT/REMEDIATION

e Release Discovered: _____

stance(s) released: (check all that apply) ☐ Gasoline ☐ Alcohol-blended fuel (Type and percentage of alcohol: _____)
)iesel ☐ Used Oil ☒ Jet Fuel (type: JP-4) ☐ Aviation Gasoline ☐ Other: (be specific) _____

rce of Release (specify all that apply):
pills/overfills ☐ Piping leaks ☐ Dispenser leaks ☐ Tank corrosion ☒ Other: Draining of water from tanks

'es ☐ No Has a receptor survey been conducted?
'es ☐ No Has a water well inventory been conducted?

'es ☒ No Have vapor impacts to buildings or utility lines ever been associated with this release? If Yes, specify the measures taken to abate the impact and indicate the latest date that an impact was noted: _____

'es ☒ No Have subsurface utilities ever been affected with NAPL or vapors by this release? If Yes, indicate the latest date that an impact was noted: _____

ot already provided in *Release Determination Report Form* (TNRCC-0621), or if the information has changed since mittal of the *Release Determination Report*, indicate number of tanks currently and formerly located at this site (attach es as necessary):

☐ Soil Vapor Extraction _____ to _____ (dates).
In-Situ Bioremediation 5/93 to 5/96 (dates).
None

III. RELEASE ABATEMENT/REMEDIATION (Continued)

Type(s) of groundwater remediation and time periods the remediation method was operational (indicate all that apply)

- ☐ Groundwater Pump and Treat _____ to _____ (dates)
- ☐ Air Sparging/SVE _____ to _____ (dates)
- ☐ In-Situ Bioremediation _____ to _____ (dates)
- ☐ Other: _____ _____ to _____ (dates)
- ☒ None

☒ Yes ☐ No - Were copies of all receipts and manifests to document disposition of all wastes submitted to the T
NA If No, attach copies to this form.
in situ treatment

Measured total volume of NAPL recovered: _____ gallons.

Estimated total volume of soil treated/removed: _____ cubic yards (exclude soil cuttings removed from borings).

Estimated total volume of groundwater treated/removed: _____ gallons (if known).

Estimated pounds of hydrocarbons removed or treated from soil (if known): _____

Estimated pounds of hydrocarbons removed or treated from groundwater (if known): _____

Estimated percent of total contaminants removed or treated (if known): _____

IV. SOIL DATA VALIDATION

Are there now affected surface soils (contamination exceeding health-based target concentrations) present within 2 feet below the ground surface? ☐ Yes ☒ No ☐ Unknown

Type of surface cover over affected surface soil area:

☒ Paved [☒ Asphalt or ☒ Concrete] Percent of affected soils covered? 75-100 ☐ Unpaved

☐ Other: _____

Is there public access to the uncovered affected surface soil area? ☐ Yes ☒ No

Total number of borings: 17 (including those completed as monitor wells)

☒ Yes ☐ No Was the vertical and horizontal extent of soil impacts defined (to the more stringent of health-based target or groundwater protective soil concentrations horizontally and to groundwater or nondetect vertically) by the borings?

☐ Yes ☒ No Are shallow (0-15 feet below ground surface) soils affected (contaminant levels exceed health-based target concentrations) on adjacent properties (including right-of-way properties).

☒ Yes ☐ No Were all soil sample collection, handling, transport, and analytical procedures conducted in accordance with TNRCC and EPA requirements? If No, provide justification: _____

MAXIMUM SOIL CONCENTRATION LEVELS

Soil Contaminants	Sample Date	Sample Location	Depth (in feet below ground surface)	Analytical Method	Maximum Concentration* (mg/kg)	Target Cleanup Goals** (indicate source of target cleanup goals: 1990 or 1994 [Plan A or B] guidance)
Benzene	8/27/92	B1	9.0 ft	8020	less than 0.4	6.3
Toluene	8/27/92	B1	9.0 ft	8020	0.4	3257
Ethylbenzene	3/18/93	MPA	1.0 ft	8020	13.0	3357
Total Xylenes	3/18/93	MPA	1.0 ft	8020	130.0	968
Total BTEX						
TPH	8/28/92	B8-2	2.0 ft	418.1	1100.0	NA
Other Total Lead	8/28/92	B6-3	3.0 ft	690	21.0	NA
Other Napthalene					99.0	782

Enter maximum soil analytical results for soils remaining beneath the site (take into account all available data, including information obtained during the release determination (tank removal from service, minimal site assessment, etc)).

If Plan A cleanup goals were used, provide the potential groundwater beneficial use category and a justification of how it was determined in Section VI.

1990 cleanup goals may be used only if all activities necessary to meet those goals were completed by November 8, 1995.

V. GROUNDWATER DATA VALIDATION

Is groundwater at the site impacted? ☐ Yes ☒ No

Did the assessment document that groundwater was not impacted? ☒ Yes ☐ No If No or unsure, provide justificatic not determining whether there is a groundwater impact: Water was only encountered in one of the th wells constructed around tank 20. MW13 was the only well with recoverable water vol

Total number of monitoring wells installed: 3 Number of monitor wells remaining at the site: 3
Will any of the remaining wells be used in the future? ☒ Yes ☐ No If Yes, specify exactly which well(s) will be use All three wells will be maintained for use in monitoring potential leaks from other tanks in the vicinity.
If No, they must be plugged in accordance with 30 TAC Chapter 338 after obtaining approval for site closure. D the wells until you receive concurrence on site closure. Costs of well plugging may be allowable for reimbursement eligibility requirements are met and if the wells were installed under the direction of the TNRCC specifically to addr confirmed release at the site. Provide a proposal with this form (if the site is eligible for reimbursement) for costs well plugging.

Measured total dissolved solids (TDS) concentration in groundwater: 572 mg/l. From which monitor well(was/were the sample(s) collected? MW13

Measured groundwater yield at the site: _____ gallons/day (as determined from well adequately screened impacted aquifer). ☒ Not determined.

Measured groundwater depth at the site ranges between 20 and NA feet below the top of well casing.

Time period of groundwater monitoring at the site (dates): 9/22/92 to NA

Total number of groundwater monitoring events: one

What type of aquifer is impacted? (unconfined, confined, semi-confined): unconfined - perched

Distance from maximum plume concentration point to nearest existing downgradient well location (not monitor w <0.5 mile ft. in _____ direction (Input ">0.5 mile" if there is no well within 0.5 mile downgradient)

Are any water supply wells impacted or immediately threatened? ☐ Yes ☒ No
If Yes, specify type of well: ☐ Drinking water ☐ Non-drinking water

Are there any existing water wells located within the area of impacted groundwater? ☐ Yes ☒ No
If Yes, specify type of well: ☐ Drinking water ☐ Non-drinking water

Has surface water been affected? ☐ Yes ☒ No

Will the groundwater contaminants likely discharge to a surface water body? ☐ Yes ☒ No

What is the potential impact of affected groundwater discharge on surface water?
☐ Current impact ☐ Discharges within 500 ft. ☐ Discharges within 500 to 0.25 miles
☒ No potential impact

☒ Yes ☐ No Were groundwater sample collection, handling, transport, and analytical procedures conducted a documented in accordance with TNRCC requirements? If no, provide justification: _____

V. GROUNDWATER DATA VALIDATION (Continued)

☒ Yes ☐ No — Is the extent of groundwater contamination defined (to MCL concentrations)? If No, provide justification for not defining the plume: Groundwater contamination resulting from a release from the tank 20 site would be limited to the area near MW13.

☐ Yes ☒ No — Have groundwater impacts from this release been detected on adjacent properties? If No, is off-site migration probable? ☐ Yes ☒ No Is there documentation that off-site migration has **not** occurred (sample results from off-site sampling point)? ☒ Yes ☐ No

☐ Yes ☒ No - Was the static groundwater level above the top of the well screen in any monitor wells during any of the last 4 monitoring events? If Yes, provide a statement of validity regarding these samples:

☒ Yes ☐ No NA — Have groundwater samples from all monitor wells met the target cleanup goals for the last four consecutive sampling events?

MAXIMUM GROUNDWATER CONCENTRATIONS

Groundwater Contaminants	Sample Date	Sample Location	Laboratory Method	Maximum Concentration* (mg/l)	Target Cleanup Goals** *(indicate source of target cleanup goals: 1990 or 1994 [Plan A or B] guidance)*
enzene	9/22/92	MW13	8020	0.200	NA
Toluene	9/22/92	MW13	8020	less than 0.001	NA
thylbenzene	9/22/92	MW13	8020	0.006	NA
Total Xylenes	9/22/92	MW13	8020	less than 0.001	NA
otal BTEX					
TPH	9/22/92	MW13	418.1	4.9	NA
ther _____					
Other					

* Enter maximum groundwater analytical results from the most recent 12 months of monitoring.

** 1990 cleanup goals may be used only if all activities necessary to meet those goals were completed by November 8, 1995.

No target groundwater concentrations listed for beneficial use category IV groundwater.

VI. JUSTIFICATION FOR CLOSURE

Please provide a brief summary supporting this request for site closure, including footnoted discussions for the above entries as necessary. **Include discussions providing necessary justifications for any site conditions which deviate from the specific requirements of TNRCC rules and policies, including the document *Risk-Based Corrective Action for Leaking Storage Tank Sites*.** Provide documentation to justify case closure, including information which addresses the potential for future exposure, the existence of impervious cover or other actions which may prevent exposure or limit infiltration, the absence of receptors, etc.

Data from soil samples collected at the site in 1992 and 1993 showed that contaminant levels at the site were close to meeting State of Texas risk-based criteria for Beneficial Groundwater Use Category I. In March 1993, a pilot scale bioventing system was installed at the site by Parsons ES. No soil sampling after 1993 has been performed at the site due to a high density polyethelene (HDPE) liner that was installed after bioventing system installation. However, soil gas analytical data collected 1 year and 3 years after system installation indicate substantial reductions in hydrocarbon contamination. BTEX concentrations in soil gas were reduced to nondetect, or near nondetect levels, during the first year of system operation. BTEX concentrations generally were further reduced as a result of bioventing performed under the extended program. Field and analytical soil gas results strongly suggest nearly complete remediation of hydrocarbon contaminants at the Tank #20 site. The potentially impacted uppermost groundwater was considered beneficial use category 4 because it was only encountered in one of the three monitoring wells installed at the site. Because of the discontinuous and perched nature of groundwater beneath the site, the anticipated yield from this aquifer is less than 150 gallons/day.

VII. REPORT PREPARATION

Based on the results of the site investigation and the additional information presented herein, I certify that the site investigation activities performed either by me, or under my direct supervision, including subcontracted work, were conducted in accordance with accepted industry standards/practices and further, that all such tasks were conducted in compliance with applicable TNRCC published rules, guidelines and the laws of the State of Texas. I have reviewed the information included within this report, and consider it to be complete, accurate and representative of the conditions discovered during the site investigation. I acknowledge that if I intentionally or knowingly make false statements, representations, or certifications in this report, I may be subject to administrative, civil, and/or criminal penalties. **I certify that the site has met all requirements for closure and that closure is appropriate.**

Project Manager: Brian Vanderglas CAPM No.: 00758 Expiration date: 8/11/97

Company: Parsons Engineering Science, Inc.

Address: 8000 Centre Park Drive City: Austin State: TX Zip: 78754

Telephone No.: (512) 719-6000 Fax No.: (512) 719-6099

Signature: Brian Vanderglas Date: 25 March 1997

By my signature affixed below, I certify that I am the duly authorized representative of the Correction Action Specialist named and that I have personally reviewed the site investigation results and other relevant information presented herein and considered them to be in accordance with accepted standards/practices and in compliance with the applicable TNRCC published rules, guidelines and the laws of the State of Texas. Further, that the information presented herein is considered complete, accurate and representative of the conditions discovered during the site investigation. I acknowledge that if I intentionally or knowingly make false statements, representations, or certifications in this report, I may be subject to administrative, civil, and/or criminal penalties. **I certify that the site has met all requirements for closure and that closure is appropriate.**

Corrective Action Specialist: Parsons Engineering Science CAS No.: 00101 Expiration date: 10/16/97

Company: Parsons Engineering Science, Inc.

Address: 8000 Centre Park Drive, Suite 200 City: Austin State: TX Zip: 78754

Telephone No.: (512) 719-6000 Fax No.: (512) 719-6099

Signature: Brian Vanderglas Date: 25 March 1997

By my signature affixed below, I certify that I have reviewed this report for accuracy and completeness of information regarding points of contact and the facility and storage tank system history and status. I acknowledge that if I intentionally or knowingly make false statements, representations, or certifications in this report related to the contact information, and the facility and storage tank system history and status information, I may be subject to administrative, civil, and/or criminal penalties. I attest that I have reviewed this report for accuracy and completeness. I understand that I am responsible for addressing this matter. **certify that the site has met all requirements for closure and that closure is appropriate.**

Signature: _____ Date: _____

E FOLLOWING ITEMS MUST BE SUBMITTED WITH THIS FORM IF NOT PREVIOUSLY SUBMITTED:

. site map illustrating the locations of the entire UST and/or AST system (including piping, dispensers, observation wells, etc.), ll soil borings and monitoring wells and all other sampling points, subsurface utilities, and surface water within 500 feet.

A copy of the latest groundwater gradient map (if monitor wells were completed).

ummary tables of all soil, groundwater and surface water analytical results, including samples collected from any tank removal om service activities, tank system repair activities, and those collected from borings and monitor wells. The tables must clearly identify the sample number, date of collection, sampling locations, depths (if applicable), and analytical results.

opies of any manifests or other waste receipts, and any other documents necessary for case closure.
